

Experiment 12:  
Q)CONFIGURE DNS WITHIN A LAN

## Experiment-12

### Q) Configure web server, DNS within a LAN

Aim: to configure DNS server to demonstrate the mapping of IP addresses & domain names

Topology:

connect a PC & server to a switch and assign IP address as 10.0.0.1 & 10.0.0.2 resp

configuration:

open Cisco packet tracer & arrange as given in topology and configure the devices as given

PC: IP address: 10.0.0.1

Server: IP address: 10.0.0.2

connect PC & server via switch PT

PC connects to switch on interface Fa0/0 & switch on Fa0/1

Server connects to switch on interface Fa0/0 & switch on Fa0/1

Server 0:

go to server → services → DNS enable on

In the test fields add:

Name: abc

Address: 10.0.0.3

Click-add

go to HTTP

Click edit for index.html [change if needed]

Save

Procedure:

- 1) Go to PC → Packet Tracer → Web browser
- 2) Search 'abc' in url bar (01)
- 3) Search 10.0.0.3 in url bar

output: for both 'abc' & 10.0.0.3

Cisco packet tracer

Welcome Cisco packet tracer. Opening doors to new opportunities. Mind will open.

### Observation:

DNS translates domain names to IP addresses. It simplifies accessing website by using human readable names.

In this experiment, a web server & DNS were configured with a LAN to map domain names to IP address. The PCO successfully accessed the server 0 of both its IP address & the config name 'abc'. The config was successful allowing the web page to be successful and accessed via both methods.
